TITLE : BURGLAR-PROOF PORTABLE
TELEPHONE SYSTEM

ABSTRACT : PROBLEM TO BE SOLVED: To provide a burglar-proof portable telephone system that sends photographed image data and audio data to a receiver through a telephone line and reproduces the data as required.

SOLUTION: In the burglar-proof portable telephone system a portable telephone set 1 is provided with a digital camera 2, and an own position decision means such as GPS and with a memory M1 that stores an image photographed by the digital camera 2, position data at a photographed point of time obtained by the own position decision means and audio data for a prescribed period. The data stored in the memory M1 are modulated by a MODEM built in the portable telephone set 1 and sent to a receiver 10 set in advance through a telephone line, and the receiver 10 is provided with a memory M2 that stores data sent from the portable telephone set 1 together with transmitting time or receiving time data for each incoming call to store data for each of plural incoming call times and with a reproduction device that reproduces desired data stored in the memory M2.
